Acquisition Date : Août 2025 (in progress, planned for: 31/01/2026
Expected Duration : 5 mois

Following an international call for proposals by UNESCO, SIT E-learning Solutions was selected to design and deploy a comprehensive LMS platform to law enforcement training as part of the project: "Training of Law Enforcement on International Standards on Freedom of Expression and Media Relations".
The solution includes two components: delivering an LMS, Plus, instructional design and production of two gamified elearning courses.

1- LMS:

- Hosting LMS and WebApp, UX/UI and learning experience, with integration of the learning paths;

- Configuration of the user experience and the traceability of training data;

- Multilingual adaptation of UI and content;

- Indicators for monitoring the pedagogical impact and progress dashboards;

- intelligent features (journey analysis, automatic recommendations, personalized tracking) developed in collaboration with an AI expert and a BI analyst.

2- ID and production of gamified elearning courses:

- Enhancement of scripting/scenario of the learning content in collaboration with UNESCO SMEs,

- Design and production of two gamified modules, with interactive simulations, mini-games, quizzes, formative assessments, and badges,

- Creation of a realistic graphic and narrative environment, allowing learners to practice in concrete and safe situations.
